

System Loco.

Food and Beverage

Revolutionizing the Food and Beverage Industry with IoT Solutions

In an ever-evolving Food and Beverage industry, ensuring the quality, safety, and efficiency of your supply chain is non-negotiable. At System Loco, we're dedicated to transforming the way you manage your food and beverage logistics. Our state-of-the-art IoT solutions provide real-time visibility, tracking, and optimization of your products, from source to shelf.

Why use the System Loco Logistics Cloud for Food and Beverage

End to end visibility – With solid tracking technology that covers both indoor environments and transit routes, you gain seamless end-to-end visibility throughout your assets' journey.

In transit monitoring – Gain supply chain visibility in real time, not just at milestone check-ins, for addressing quality, compliance and security. Validate that materials are secure with real-time alert notifications for intervention and prevention.

Multi modal journeys – Our solutions provide a seamless and flexible travel experience worldwide. Supported by a comprehensive list of airlines, our globally certified devices ensure reliable communication anywhere, allowing you to focus on your business with confidence.

Comprehensive device management – Our cloud-based device management platform streamlines the oversight of your device infrastructure with effortless ease. Got your own software? Our APIs can sync up with your system in just a few clicks.

Featured Devices

Explore our range of System Loco IoT Products:

LocoTrack HGR4

The ultimate in-transit monitoring and tracking hub, equipped to monitor temperature. Ensure your perishable goods are transported under optimal conditions, minimizing quality issues and product spoilage.

LocoTrack HGD4

Designed for single-use and recyclable scenarios where reverse logistics may not be possible. This hub offers the same robust in-transit monitoring capabilities, guaranteeing product integrity from source to destination.

LocoTag E4BL

A versatile IoT tag capable of logging information related to totes or crates, both within your warehouse and during transit. Generate full delivery assurance certificates for every journey, providing irrefutable proof of your commitment to quality.

Our Commitment to Quality Assurance

At System Loco, we recognize the paramount importance of product quality and safety in the Food and Beverage industry. Our solutions are meticulously designed to meet the strictest industry standards and regulations, ensuring your goods reach their destination in perfect condition, every single time.

Live End-to-End Monitoring – We provide live end-to-end monitoring of food and beverage tracking during transit. Our solutions reduce human error by automating the monitoring process and the confirmation of condition quality during journeys, accounting for temperature variations, delays, and dwell times.

Reducing Waste and Rejection – We massively reduce waste and rejection by enabling real-time tracking of shipments to destinations. If a delivery is running late, it could potentially be redirected to be delivered elsewhere. Our instant certification of shipments and their condition during a journey ensures comprehensive quality control.

Flagging Critical Issues – Our IoT solutions can flag issues in shipments, such as faulty refrigeration units or areas within trailers that have temperature differentials. This proactive approach allows you to take corrective action swiftly, ensuring the safety and quality of your products.

Partnering for Success – Vendors can utilize our user-friendly SaSS solutions or collaborate with our esteemed partners for a managed solution. Our list of trusted partners includes:

Seamless Integration

The System Loco Cloud is integration-ready, with the capability to seamlessly integrate with a range of platforms, including:

We have a solution out of the box, ready to go
